

Wednesday 6th June 2017

Thank you so much to Anya for the wonderful Magic Plant Food she has donated to the Hengistbury Head Wildlife Garden. The instructions for making more are really useful too. We will select some hungry plants to feed on the nutritious Nettle Food you have extracted. We do have an area of nettles in the garden to ensure butterflies come and feed while they are also enjoying Buddleias. The moths are also partial to nettles and the moth trap is situated right by them. You may have seen some of the moths on display in a container in the shop.

The meadow is looking fantastic and there is the promise of plenty more as June continues.

We are just making sure plants have not been too severely disrupted by the strong winds and heavy rain. The flax and wheat is continuing to thrive. The area around the pond is becoming established with plants with aroma; Chamomile, Lavender, Lemon Balm and Sage being some of them.

Overall the garden has really filled out since last month and there are scents and flowers all around. Enjoy the changes.
